

LG French-Door Refrigerator with Door-in-Door (LFX31945)

- **Added Convenience** – LG’s convenient “Door-In-Door” feature consists of a magnetically sealed section of one of the two refrigerator doors that releases and allows consumers quick, easy access to the most commonly needed items in the interior compartment without opening the entire refrigerator. Simply push a button on the door handle to release the magnetic seal. Because of the Door-in-Door™ feature, less cool air escapes when the easy access compartment is opened. This keeps cold air in the rest of your fridge where it matters most.
- **Super-Capacity** – Offers a spacious 31 cubic feet of capacity, allowing 20% more usable space compared to LG’s standard width French-door refrigerator, so consumers have more room to store more food than ever before.
- **Keeps Food Fresher, Longer** – LG’s Smart Cooling Plus System is designed to maintain superior humidity and temperature levels to help keep food fresher, longer. Digital sensors constantly monitor conditions within the refrigerator, while LG’s Linear Compressor and Dual Evaporator react quickly to help keep humidity and temperature at a level that's best to keep your food fresh.
- **Energy Efficiency** – This model is ENERGY STAR® qualified, meaning it is amongst the most energy-efficient refrigerators in its class.
- **Premium Finishes** – With a stainless steel exterior that includes an LCD LED display as well as interior LED lighting, this model keeps consistent with modern kitchen décor trends and functionality.
