

WATCHMAN™ Left Atrial Appendage Closure Device:

Stroke Risk Reduction Option For Indicated Patients With Non-Valvular Atrial Fibrillation

Non-Valvular Atrial Fibrillation (AF) is an irregular heartbeat that can lead to blood clots, stroke and other heart-related complications.

More than **5 million** Americans are affected by **AF**²

AF patients have a **5-fold** increased risk of stroke³

There is a **70%** chance of death or permanent disability for **AF** patients who suffer a stroke⁴
