

## DISCOVER IMPROVED PERFORMANCE THROUGH DIGITAL INTELLIGENCE

### INDUSTRY CHALLENGES

Meeting energy demands in the future requires overcoming key challenges facing Oil and Gas producers today:

3 critical challenges in Oil and Gas:

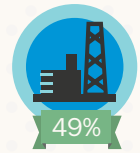

- Improving production performance while maintaining safety
- Managing large amounts of production data
- Making remote operations more efficient

Oil and Gas data volume growth each year

96% of companies are not using data to its full potential

49% of Oil and Gas companies consider managing data as their biggest business challenge

### BENEFITS OF EFFECTIVE DATA MANAGEMENT

The value of integrated operations in upstream Oil and Gas include:

increase in operator productivity

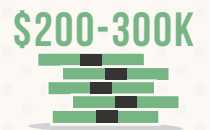

decline in operating costs

reduction in OPEX

increase in production

typical savings, per well, from better monitoring

### THE HONEYWELL SOLUTION

Honeywell offers digital field technology through Digital Suites for Oil and Gas, which can help improve production performance through digital intelligence:

6 Suites in the Digital Suites for Oil and Gas:

- Operational Data
- Equipment Effectiveness
- Production Surveillance
- Process Safety
- Operational Performance
- Production Excellence

150

50 sites in the North Sea and another 100 sites worldwide are using Honeywell software solutions

3-5%

Expected production increase from using Honeywell's Digital Suites for Oil and Gas

\$200,000 USD

Amount of cost avoided by recent upstream customer through better well surveillance on just one well
