

The MICHELIN® TWEEL® Airless Radial Tire Story

In the late 1990's, Michelin's innovative engineering team was challenged with developing a new product that has all the advantages of a pneumatic tire but eliminates the issue of air loss.

The idea for an airless radial tire was born!

So, in Greenville, SC at the Michelin Americas Research and Development Company, the concept was brought to life – an airless radial tire and wheel combination. The product was branded TWEEL and the first prototypes were introduced at the 2006 Detroit Auto Show.

And Everyone Took Notice And the Accolades Came...

In 2012, following significant development and industrialization of the prototypes, the MICHELIN® X® TWEEL® SSL was released to the skid steer market.

Operators rejoiced with no downtime and no flats!

And MORE Accolades Came...

Now, in 2014, Michelin is proud to expand the offering to three TWEEL® airless radial products – The X® TWEEL® SSL All Terrain, the X® TWEEL® SSL Hard Surface, and X® TWEEL® TURF™

And MORE to Come...
