LEED the Way, Every Day

You're committed to a more sustainable future and a LEED-certified facility is one of the most visible examples. But once the plaque is in your lobby, how do you continue to realize the benefits of your building? Especially the improved air quality, and energy and water efficiency it can deliver? The U.S. Green Building Council's (USGBC) LEED® Dynamic Plaque™ measures and scores facility performance in real time. Combined with Honeywell's building automation technology, it can provide insights that help you maintain an efficient and effective facility each and every day. That's true sustainability.

USGBC and Honeywell are currently piloting this dynamic tool at USGBC's corporate headquarters.
