**JADENU™ (deferasirox) tablets are an iron chelation therapy approved for the treatment of chronic iron overload due to blood transfusions and non–transfusion–dependent thalassemia (NTDT). It is a new formulation of deferasirox that removes iron from the body with oral administration.**

Jadenu is approved by the FDA for the treatment of chronic iron overload due to blood transfusions and non–transfusion–dependent thalassemia (NTDT). Exjade also receives Orphan Drug status in the US, indicating potential for use in children with severe forms of thalassemia.

**IMPORTANT SAFETY INFORMATION ABOUT EXJADE (DEFERASIROX) TABLETS FOR ORAL SUSPENSION**

**INDICATION**

Jadenu is indicated for the treatment of chronically elevated levels of iron in the blood caused by repeated blood transfusions (transfusional iron overload and/or non-transfusional iron overload), beta-thalassemia major (including transfusional iron overload), and beta-thalassemia minor (familial beta-thalassemia) in patients six years of age and older.

**CONTRAINDICATIONS**

Jadenu is contraindicated in patients with pre-existing severe kidney and liver problems; high-risk myelodysplastic syndromes; advanced cancer; and low platelet counts. Jadenu should not be taken by patients with severe iron overload who are at risk for iron deposition in vital organs.

**WARNING**

Jadenu is an iron chelator. Iron chelators are a class of drugs that can cause serious or life-threatening side effects, including heart failure, kidney failure, liver failure, and other serious complications.

**PRECAUTIONS**

Jadenu should be used with caution in patients with a history of severe heart failure, severe kidney disease, severe liver disease, vision or hearing problems, asthma or other breathing disorders, low levels of calcium in the blood (hypocalcemia), or a parathyroid disorder. Long-term use of Jadenu can slow a child's growth.

**SIDE EFFECTS**

Adverse reactions reported in clinical trials and post-marketing experience include:

- **Gastrointestinal**
  - Nausea
  - Vomiting
  - Diarrhea
  - Abdominal pain

- **Respiratory System**
  - Nasal congestion
  - Rhinorrhea

- **Skin and Appendages**
  - Rash

- **Other**
  - Hypersensitivity reactions (including anaphylaxis)

**INTERACTIONS**

Jadenu can interact with other medications, including those that may affect the heart and blood pressure, those that may cause bleeding, and those that may cause liver damage. Jadenu should not be taken with certain medications, including those that interact with the body's iron absorption, those that interact with other medications, and those that interact with blood thinners.

**DOSAGE AND ADMINISTRATION**

Jadenu should be administered on an empty stomach. It should be taken with a glass of water, apple or orange juice. It should not be mixed with other medications or supplements.

**HOW SUPPLIED**

Jadenu tablets are supplied in an inner blister containing 1, 2, or 3 tablets. The tablets can be swallowed whole.
