**Finally a Hands Free Solution to Stop Bathroom Mold with the New Enhanced Broan® InVent™ Series**  
*Broan® InVent™ Series now offers Humidity Sensing Fans, featuring Sensaire Sense-on-Rise Technology*

**HARTFORD, Wis.** (Jan. 30, 2017) – Bathroom fans are great at fighting moisture which can lead to mold, but only if used properly. Broan's innovative Sensaire Sense-on-Rise Technology is now available on the InVent™ Series ventilation fans. Homeowners can now have a worry free solution for excess humidity combined with the great InVent features.

Sensaire Sense-on-Rise Technology is designed to detect humidity before condensation occurs. The humidity sensor automatically turns fans on when a rapid rise in humidity is sensed, or when humidity rises above the homeowner's pre-set humidity set point. The humidity sensing technology quickly works to eliminate fogged mirrors and manage moisture, providing exceptional indoor air quality for bathrooms, laundry rooms and mud rooms. Sensaire Sense-on-Rise technology detects an increase in humidity up to 40% faster \*to automatically turn the fan on before moisture forms on mirrors.

“At Broan, we're incredibly proud of the enhanced InVent Series. Homeowners are now able to have superb ventilation and humidity sensing technology from a mid-range fan,” said Ann Roeber, Senior Global Marketing Director, household ventilation, for Broan. “The product line truly represents Broan's continuing tradition of superior indoor air quality products with the technology consumers want and need.”

As the industry leader in residential ventilation, Broan-NuTone has a long history of developing products that provide superior indoor air quality. It is this reputation and commitment to innovation and quality that led Broan to enhance the revolutionary and easy to install InVent Series.

Broan InVent Series ventilation fans feature FoldAway mounting ears and the EzDuct Connector, which allow for easy installation. The FoldAway mounting ears allow contractors to use just one fan for both new construction or retrofit applications. The EzDuct Connector makes connecting the fan housing to the duct easier than ever before, with no attic access required.

With the new TrueSeal Damper Technology, InVent fans reduce air leakage by up to 50 percent compared to competitive models\*\*, resulting in better home energy efficiency as measured via blower door tests.

The ENERGY STAR options provide contractors and homeowners with a full range of choices, all at a mid-range price point.
