Recreate your favourite dishes, from home

LG's latest cooking innovation, the InstaView ThinQ® Range with built-in Air Fry technology makes it easier to create healthier comfort foods at home.

Convenient Features to Save You Time and Energy

- LG's **Air Fry** technology circulates hot air at **high speeds** for crunchy-on-the-outside, juicy-on-the-inside goodness that's cooked evenly.
- Air Fry technology is integrated into the range's **6.3-cubic foot capacity** oven. The LG Air Fry InstaView ThinQ® Range eliminates the need for small air fry appliances that contribute to kitchen clutter, and has the benefit to create healthier dishes compared to traditional deep frying.
- It features **InstaView technology** which allows home cooks to conveniently knock twice on the oven's glass door to illuminate the interior oven light for easy monitoring of the dish, eliminating the need to open the oven door or fumble for the light.

- LG's unique cleaning features such as **EasyClean®** and **Self Clean** help to maintain a cleaner oven for maximum performance every time it's used. Without the use of any chemicals, EasyClean® removes light food residue in only 10 minutes at low heat while Self Clean employs high heat to eliminate tougher splatter from the oven's interior.

Innovative Air Fry Cooking Technology

- **Air Fry Technology** delivers precise heat for crisp, delicious food. LG's Air Fry technology evenly distributes continual precise heat so food is cooked perfectly inside, and crisp on the outside.

The Connectivity You Know, and Love

The LG Air Fry InstaView ThinQ® Range connects to both **Google Assistant** and **Amazon Alexa** smart speakers. When connected, users can control and monitor the range from any room in the house.
