The Liposonix treatment uses advanced ultrasound technology to permanently destroy unwanted abdominal fat.

- Targets the stubborn fat around your waistline
- Noticeable results after just one treatment
- Customizable to address specific “problem” areas
- Nonsurgical with little to no downtime
- Backed by over 10 years of research and testing

**FINALLY! FAT REDUCTION THAT FITS YOUR LIFESTYLE**
**LOOK AS GOOD AS YOU FEEL**

The Liposonix treatment is a nonsurgical fat reduction procedure that can get rid of targeted fat around your waistline. The treatment is completed in just one office visit and lasts about one hour. With little to no downtime or aftercare, you can resume your active lifestyle right away.

The Liposonix system is for use when there is at least 1.0 cm of subcutaneous adipose tissue beyond the selected focal depth setting of the system in the area to be treated. Most frequently reported side effects during Liposonix treatment are discomfort, pain, cold, prickling, tingling, or warmth. Treatment is contraindicated for patients who are pregnant or suspected to be pregnant. The most frequently reported side effects after Liposonix treatment, as recommended, are pain (discomfort), bruising, redness, and swelling, which are generally described (or rated) as mild.

The Liposonix system Model 2 delivers high intensity focused ultrasound (HIFU) energy that can disrupt subcutaneous adipose tissue (SAT) to provide a non-invasive approach to body contouring to achieve a desired aesthetic effect. Indications may vary from country to country, please consult your practitioner about specific indications prior to treatment.

Q: What kind of results can I expect?
A: On average, you can expect to lose one clothing size. Studies show an average waistline reduction of at least one inch.

Q: How long does the procedure take?
A: Typically a Liposonix treatment is completed in about one hour. You should consult your doctor to discuss treatment areas and time.

Q: How fast can I see results?
A: Most patients see maximum results in 8 to 12 weeks. This is the time it takes for the body to naturally remove the fat cells that were destroyed during treatment.

Q: Is the Liposonix treatment safe?
A: You can have confidence in the science behind the Liposonix system. The treatment has been extensively studied, with more than a decade of research and testing behind its development.

Q: Are there any side effects?
A: Since the Liposonix treatment is non-invasive, there is little to no downtime. Many people go back to work or resume normal activities the next day. During treatment, you may experience discomfort, pain, cold, prickling, tingling or warmth. After treatment, you may experience temporary redness, bruising, discomfort, and swelling.

Q: Will I need to do anything after the Liposonix treatment?
A: You don’t need to do anything out of the ordinary. There is no special post-care required, but we recommend that you maintain the same diet and active lifestyle before treatment – if not better!

The Liposonix treatment uses high-intensity focused ultrasound energy to reduce your waistline without surgery. Your doctor places the head of the Liposonix device on the area to be treated. High-intensity ultrasound energy is then focused on the targeted fat. Skin is not harmed as fat tissue just beneath the skin is permanently destroyed. The body naturally removes the treated fat, leaving you with a thinner, more contoured waistline.

Before and after photos are un-retouched and represent patients who have had significant results. Individual results may vary.
