

FEMA-Recognized Steel Helical Piles To Be Featured on New Series of This Old House

DELANCO, NJ, Oct. 9, 2013 -- Witness the installation completed in Point Pleasant, NJ on This Old House as host Kevin O'Conner walks through the Bay Head project that has been lifted on cribbing and is ready for the grouted helical piles for lateral support. The national premiere the HPM Technology for Flood Zone Home Elevation will air on October 17th. Visit www.thisoldhouse.com to check local listings of Episode #3303 "Getting to Work".

Foundation repair plans are designed to meet the structural support needs of each home. The repair plan uses the geotechnical properties of the area soils and the governing building codes/regulations in the area where the home is located. CHANCE® Helical Piles "screw" into the ground much like a wood screw into wood; thereby making a solid Foundation Support for the entire home. Reintroduced to the market for A and V Flood Zone installation, the patented CHANCE Helical Pulldown® Micropile (HPM) product solution has become recognized as the industry leading home elevation solution.

This technology comes from the founding helical pile manufacturer, Hubbell Power Systems, Inc. (HPS) whose products span the civil construction, electric utility and telecommunications markets. Providing stabilization for elevated homes, homeowners have begun to experience peace of mind knowing that their home can withstand future storm impact.

Certified CHANCE Alliance Network installers offer a premium, fully transferable product warranty. For more information or to download the brochure, please visit www.abchance.com/peaceofmind/

An Engineer is needed to assess the structural needs of each home. The quantity of helical piles and the depth that is needed is determined on a case by case basis. To find out how helical piles can eliminate the need to re-locate your home before you install and meet FEMA baseline flood elevation guidelines, visit www.thesandysolution.com.
