

GET INVOLVED

Join us to fight blindness and transform the lives of children, like Bumi, age 3, in Zambia. Born with cataracts in both eyes, her sight never developed and her mom carried her everywhere on her back, just to make sure she was safe. After being referred to the Orbis-supported Eye Annexe at the hospital in Kitwe, Bumi received sight-saving surgery and her vision is developing well. Thanks to the donations of generous people like you, her life has been transformed. She can now play outside and go to kindergarten with all the other children in her village.

Make a donation to Orbis & join us to fight blindness.

Thank you to all of our Global Corporate Partners

OUR IMPACT

We work hand in hand with our partners around the world to develop plans and strategies to tackle their unique eye health challenges. In time, with the help of concerned people like you, we ensure that they are equipped to fight blindness in their own communities.

WITH YOUR HELP, WE BRING THE WORLD TOGETHER TO FIGHT BLINDNESS.

Millions of people go blind each year – millions more suffer from poor vision – because they can't get the care many of us take for granted. We **train** doctors, nurses and medical technicians to save and restore sight. We **strengthen and improve** eye health systems by partnering with local hospitals, public health agencies, NGOs and governments. We **advocate** to make fighting blindness a priority.

Using our unique tools – over 400 expert volunteers, our Flying Eye Hospital and Cybersight, our online telemedicine tool – we equip developing nations with the skills, resources and knowledge to deliver quality eye care to their communities.

We span the globe to bring people together – expert surgeons and village doctors, community nurses and traditional healers, health ministers and community activists, global foundations and individual donors – so that we can work as one to make sure no one loses their sight to a preventable, treatable disease.

ORBIS UNITES THE WORLD TO FIGHT BLINDNESS

With the support of donors, we bring the world's ophthalmic community together to train and share resources with local doctors, nurses, and technicians. We train the entire eye care team – from health workers in rural clinics to eye surgeons in urban centers – so they can work together to prevent and reverse blindness.

OUR EXPERT VOLUNTEERS

Our training is led by our team of over 400 international medical volunteers, all experts in their respective fields. They share their skills with eye care teams through hands-on clinics and mentorship and by consulting via Cybersight, providing them with a top-quality continuing medical education.

THE FLYING EYE HOSPITAL: TEACHER. ENVOY. ADVOCATE.

Thanks to our supporters, we fly the world's only ophthalmic teaching hospital, onboard an MD-10 aircraft. It is a state-of-the-art surgical and training facility, the result of a unique and lasting alliance forged between the medical and aviation industries. The MD-10 includes an operating theatre, sterilization room, pre-and post-operative care room and patient care and laser treatment room, all linked to the 46-seat classroom by the latest AV/IT technology, which enhances the teaching capabilities of this unique airplane. It is a teacher, an envoy and an advocate.

CYBERSIGHT

Cybersight is our online telemedicine portal, bringing the medical training and consulting we do on the Flying Eye Hospital and in hospitals around the world online. Equal parts library, school and remote-medicine service, Cybersight is open to doctors around the world for research, training and consultation. It keeps the professionals we train connected with their volunteer mentors. Cybersight is a knowledge base, an online school and a live, remote-medicine platform, and it is collapsing borders.
