ONCOLOGY PROVIDERS:

YOUR PATIENTS MAY NOT UNDERSTAND THEIR RISK OF INFECTION

1.6 million
people in the United States are diagnosed with cancer each year

650,000
people receive chemotherapy

60,000
of those receiving chemo are hospitalized for chemotherapy-induced neutropenia and infection

1 of these patients

Do your patients know they’re at risk?

Or, are they among the 104,000 that were not aware of neutropenia?

Or, among the 52,000 that didn’t know to call their doctor at the first sign of a fever?

What if they knew more?

A new survey conducted among people with cancer and their caregivers by CancerCare®, the CDC Foundation and Amgen highlights:

• the need for education about neutropenia and infection risk
• the value of PreventCancerInfections.org as an evidence-based resource for people receiving chemotherapy and their caregivers

There’s help.

PreventCancerInfections.org

After visiting PreventCancerInfections.org:

80%
of respondents could correctly define neutropenia

9 in 10 respondents recognized the importance of calling their doctor at the first sign of a fever — the most important action a patient can take to prevent an infection from becoming deadly

DON’T LET YOUR PATIENTS BECOME A STATISTIC ...
