The results of a recent survey, commissioned by Kybella, revealed the personal impact of submental fullness on women and men. Many women and men reported altering their behavior or looks to conceal a double chin. For example:

- 35% of surveyed women and men have worn clothing that does not show their chin.
- 29% of surveyed women and men have gone to great lengths to hide the area under their chin, including using makeup, clothes, or accessories.
- 35% of surveyed women and men have felt shy or self-conscious about the appearance of the area under their chin. 
- 23% of surveyed women and men have reported feeling bothered by the appearance of the area under their chin.

Many respondents reported altering their behavior or looks to conceal a double chin. For example:

- Many respondents wore clothing that does not show their chin, including makeup, clothes, or accessories.
- Many respondents felt shy or self-conscious about the appearance of the area under their chin.
- Many respondents reported feeling bothered by the appearance of the area under their chin.
