## Dan Young

Dan Young has been an entrepreneur and inventor since childhood. He worked in his father's upholstery shop as a kid. Always wanting to fix things, his Dad allowed him to start creating tools and gadgets that could aide them in the business. Since then he has invented business solutions in almost every industry sector and holds over 100 patents.

Dan is best known for being the inventor of LavaGel®, a mineral compound that heats when it is added to water. Through this patented technology, Dan can control the temperature and the length of time LavaGel is active for and it has been used from medical supplies to food delivery services. It is patented all over the globe.

Early on, Dan oversaw the expansion of his family business and then co-founded a spin-off company to manufacture and market his portable sanitation line of products. He later formed FYI Enterprises as a vehicle to carry his extensive research and development activities into new markets. More recently, Dan co-founded Inspired Sciences, LLC for the marketing and distribution of these developed products. The flagship line of the company is its Spa Revolutions® brand PerfectSense® Paraffin & Aromatherapy, the only safe and sanitary single-use paraffin treatment found in spas, salons and the consumer market.

Dan brings 25 years of hands-on experience to assist in the challenge of marketing a unique product in a vast industry. With his Inspired Sciences partners, Dan has quickly reacted to a changing market, refining the process for sanitary paraffin treatments and expanding the product line to include the European market. He is also the driving force in the development of a continuous stream of innovative new products, including medical devices, advanced pool filtration systems, medical-ergonomic devices, wound care and emergency lighting applications.

Dan Young resides in Escondido, California with his wife and three daughters. He is an avid racquetball player and actively contributes his leadership as a founder of the youth ministry in his church.

## Chaleur

[sha-lure] **verb** chaleuring or to chaluer

1. the art of reversing and repairing the signs of aging with heat, at home, in pure relaxation using two products.
