Go Anywhere, do Anything with the LG gram Laptop

Designed to keep up with the fast-paced lives of Canadians without weighing them down, the LG gram is an ultra-lightweight laptop made for ultimate portability.

Designed With the User in Mind

- **Available in three sizes:** 17-inch, 15-inch and 14-inch, with each weighing less than three pounds (1.36kg), the LG gram offers extended battery life and proves that portability, performance and battery life can co-exist.
- The 15-inch model sports a 15.6-inch, full HD IPS display touch screen delivering crisp, detailed images with precise colours.

Productivity at its Finest

- Designed with efficiency in mind, at the heart of the new LG gram is the **10th Generation Intel® Core™** processor with **Iris® Plus graphics** and up to **24GB** of dual-channel DDR4 memory. Creators and content lovers will appreciate having the speed and power to edit **4K video** on-the-go and marvel at how slick games can be with **Iris® Plus** built-in.
- Built with **Wi-Fi 6**, this ensures enhanced wireless connectivity for better efficiency and lower battery consumption.

The Ultimate Solution for Maximum Portability

- With a large **80Wh battery** in both the LG gram 17-inch and 15-inch models, users can enjoy up to 17 hours of use away from an outlet.
- Take your laptop anywhere and everywhere you go. The 15-inch LG gram laptops are phenomenally light weight, weighing just 2.5 lbs (1,132 g), so you don't have to sacrifice portability.

With a Durable Body, the LG gram is Built to Last

- LG gram may be lightweight but that doesn't mean durability is downgraded. The **full metal body** is made of a magnesium-alloy which is commonly used in building aircrafts.
- The LG gram laptops are so durable, they've even **passed the MIL-STD-810G** – a series of tests designed by the U.S military to test equipment limits in severe conditions.
